

Aleece Reetz

Hi my name is Aleece Reetz, BSN, MA. I went to University of Nebraska and then went on to get my nursing degree from Clarkson College in Omaha. I am currently a lead study coordinator here at Physician Research Collaboration.

I have worked in research for 10 years. I have been a lead research study coordinator in pediatric and rheumatology research for 8 years and have participated in more than 90 clinical trials. As a lead study coordinator I work directly with patients by conducting visits on site and keeping in contact via phone between visits. I make it a priority to address all questions and concerns throughout participation of a research trial by being in close contact with the company conducting the trial and the physician to make sure that we are always providing the best and safest care. It is always my goal to make sure research patients' experience is a positive one.

My love for research continues to grow as more and more patients are able to experience the many benefits from the therapies that are provided, and the excitement for what the future holds in this ever-changing world of research.

I was born and raised on a farm outside of Crete, NE and currently live on a farm outside of Kramer, NE with my husband, our 3 children, and our yellow lab. Outside of work I stay very busy running our young children around to and from activities, spending time with both of our large families, traveling to new places, and helping my husband on our farm.
